September 2021

COVID-19 Third Dose Vaccinations

The CDC recommends that you should receive a 3rd dose at least 28 days after your second dose if you are moderately or severely **immunocompromised**.

That includes the following:

- Currently receiving active cancer treatment for tumors or cancers of the blood
- Received an organ transplant and are taking medicine to suppress the immune system
- Received a stem cell transplant within the last 2 years or are taking medicine to suppress the immune system
- Moderate or severe primary immunodeficiency (such as DiGeorge syndrome, Wiskott-Aldrich syndrome)
- Advanced or untreated HIV infection
- Active treatment with high-dose corticosteroids or other drugs that may suppress your immune response

Everyone else:

- The CDC recommends that people get a 3rd dose 8 months after their **second** shot of the Pfizer or Moderna vaccine. This recommendation will be in effect on Sept. 20, 2021 in the United States.
